LETTER OF TRANSMITTAL.

THE PANAMA CANAL, CANAL ZONE,
DEPARTMENT OF HEALTH,
Balboa Heights, June 9, 1915.

Lieut. Col. Chester Harding, Acting Governor of the Panama Canal, Balboa Heights, Canal Zone.

Sir: I have the honor to submit the following report of the operations of the department of health for the month of May, 1915. Very respectfully,

WM. F. MASON, Chief Health Officer.

GENERAL REMARKS.

No cases of yellow fever, smallpox, or plague have originated on or were brought to the Isthmus during the month.

VITAL STATISTICS.

EMPLOYEES.

The health of the employees remained good during the month. The number of names on the rolls for the preceding month was 34,600.

The total number of admissions to hospitals and quarters was 886, a rate of 307.28 per thousand, as compared with 282.02 for the preceding month and 407.92 for the corresponding month of last year.

The total number of deaths from all causes was 13; of these 7 died from disease, or 2.43 per thousand, as compared with 1.76 for the preceding month and 5.74 for the corresponding month of last year.

The constantly noneffective rate was 9.95, compared with 9.85 for the preceding month and 11.65 for the corresponding month of last year.

The total admission rate for malaria, hospitals and quarters, was 33.64, compared with 28.48 for last month, and the total noneffective rate 0.97, compared with 0.95 for last month; each of these rates being lower than for the same month last year. The diseases, next to malaria, causing the highest admission rates, in the order of their numerical importance, were: Venereal diseases, diseases of the digestive system, nervous system, and nonvenereal diseases of the genito-urinary system. These five classes of diseases caused 50 per cent of all admissions to hospitals.

There were no admissions from typhoid fever, as against a rate of 0.35 for the previous month and 0.75 for the corresponding period of last year.

EFFECTS OF RACE.

The admission rate to hospitals and the death rate for disease for black employees were 102.70 and 2.83 per thousand, as compared with 307.19 and no deaths for white employees. The noneffective rate for disease and injuries for black employees per thousand was 8.39, as compared with 19.29 for white employees.

The admission rate to hospitals and quarters for malaria was 21.83

per thousand for blacks, as compared with 104.84 for whites.

There were no deaths among Americans, as compared with a rate of 37.68 for Europeans, due to external causes. The admission rate to hospitals for disease for the latter was 866.56, compared with 224.04 for Americans. The admission rate for malaria to hospitals and quarters was 414.44 for Europeans, as compared with 58.81 for Americans.

DEPORTATIONS.

There were 9 deportations accomplished during the month, 7 employees and 2 nonemployees; for disease 8, and for injury 1.

CANAL ZONE.

The population of the Canal Zone is 34,560, among whom there was a total of 36 deaths; of these 30 deaths were from disease, giving a rate of 10.41 per thousand, as compared with 5.71 for the preceding month and 12.93 for the corresponding month of last year. Of the total deaths from disease the percentage under 5 years was 60, compared with 69 last month.

There were 44 births reported, giving a rate of 15.28 per thousand. Of these births 10 were of white and 34 of colored children. There were 12 deaths of children under 1 year of age, all of whom were colored, giving an infant mortality of 353 for colored children, with a general average of 273. The percentage of stillbirths to total

births was 10.

PANAMA CITY.

The population of the city is 60,373, among whom there was a total of 132 deaths. Of these 127 deaths were from disease, giving a rate of 25.24 per thousand, as compared with 25.44 for the preceding month and 32.31 for the corresponding month of last year. Of the total deaths from disease the percentage under 5 years of age was 63, compared with 51 last month. The principal causes of death showing an increase as compared with April were: Cancer 3, as against 1 last month; organic disease of the heart 9, as compared with 6 for April; and pneumonia 22, as against 18 for the preceding month.

There were 255 births reported, giving a rate of 50.68 per thousand. The infant mortality was 208 per thousand. The per-

centage of stillbirths to total births was 8.

COLON.

The population of the city is 29,331, among whom there were 47 deaths; of these, 44 deaths were from disease, giving a rate of 18.00, as compared with 19.64 for the preceding month and 30.25 for the corresponding month of last year. Of the total deaths from disease, the percentage under 5 years was 37, compared with 52 last month.

The principal causes of death showing an increase as compared with April were: Pellagra, 2, as against none for the preceding

month, and pneumonia, 2, compared with 1 last month.

There were 65 births reported, giving a rate of 26.59 per thousand. The infant mortality was 200 per thousand. The percentage of stillbirths to total births was 6.

HOSPITAL DIVISION.

ANCON HOSPITAL.

During the month the average number of patients constantly in hospital was 460.25. The per capita cost of patients in hospital, proper, was \$1.94 gross, and \$0.897 net. The per capita cost of patients in the insane asylum was \$0.465.

BOARD OF HEALTH LABORATORY.

The following work in addition to routine was performed by the

Board of Health Laboratory during the month.

The only work of an investigative nature completed in May was a study of tuberculosis in the inhabitants of the Panama Canal Zone, bearing chiefly on its incidence, duration, and type of distribution in the negro race. A synopsis of the findings follows:

A review of the pathological records at the Ancon Board of Health Laboratories covering the period of time beginning December 11, 1909, and ending May 6, 1915, reveals 452 protocols on fatal cases of tuberculosis; 163 protocols in which tuberculosis was a coincident factor and 88 specimens of surgical tissue which contained a tuberculous process. Six of the individuals from whom the surgical specimens were taken were later included in the autopsy lists.

The percentage of fatal cases of tuberculosis in this study was 19.41, while in the anatomical lists preceding this period of time it is represented by 8.20. In spite of the fact that variations in the distribution of the zone population have favored the receipt of more cases at this laboratory during the later period of time, it does not explain the great increase in the number of cases here represented, for the hospital in the city of Panama has also shared

in the receipt of these cases.

It would appear that tuberculosis is increasing among the negroes and chiefly among those whose stay on the Isthmus has covered several years in time. Contrary to the belief that tuberculosis is less common in the Tropics than in other climates, this review shows that the disease is common on the Isthmus and that it is increasing among the negroes. Its clinical course in these negroes can be better represented by months rather than by years, as is the case in members of the white race. The disease becomes more often widely disseminated in the negro than in the white race.

Instances of arrested or healed foci in the negro are far less frequent than in the white race. Pulmonary tuberculosis becoming widely disseminated is the common type of the disease in these people. Bone, joint, and cutaneous tuberculosis is far less common among negroes and mestizos of the Isthmus than in the

white race.

There is some evidence to support the belief that many of the

cases in this group acquired their infection on the Isthmus.

When the diseases of this region, which were disseminated by insects, were brought under control by the methods of sanitation employed, it soon became apparent that tuberculosis, as a fatal factor, led all other single factors as a cause of death, just as it does in the cooler climates of the world.

A primitive race, plus overcrowding, poverty, and ignorance, are the factors which probably explain its presence on the Isthmus

and in the terminal cities of the Canal Zone.

Where permanent colonization of the Tropics takes place and business association brings together the various races, tuberculosis will no doubt be as important an economic factor as it is in the temperate climates.

FARM FOR DISABLED.

Owing to the consolidation of the farm with the insane asylum no separate cost figures are shown this month.

INSANE DEPARTMENT.

Seven patients were admitted during the month. Three male patients were deported to British Guiana, Trinidad, and Tobago,

respectively.

The new asylum buildings are practically finished, with the exception of the installation of a dumb-waiter leading from the kitchen to female patients' messhall, painting the roofs, and placing the fence.

The sewing room has turned out a large amount of work for Ancon Hospital, such as surgical pads, sponges, operating gowns, etc.,

besides mending for the medical storehouse.

The asylum laundry has been put in operation again, thus taking care of the greater part of the asylum laundering. Only flat work, such as sheets, etc., are still being sent to the Ancon Laundry.

Grading the grounds continues to be done by a squad of male patients. Another squad is at present occupied in preparing the soil in the garden for the planting of yucca and other tubers.

Three patients employed in the carpenter shop have fabricated various articles useful in the wards, such as tables, benches, floor scrapers, etc.

The general physical health of the patients continues good.

CHRONIC WARD.

There were 27.13 chronic and incurable patients constantly cared for during the month. The cost per patient per day was \$0.257.

Detailed statistics are shown in Table XIII.

COLON HOSPITAL.

The average number of employees constantly sick was 21.66. The average number of days' treatment per employee was 9.70. The per capita cost of patients was \$2.70 gross and \$1.88 net. Detailed statistics are shown in Table XIV.

PALO SECO LEPER ASYLUM.

The number of patients under treatment at the end of the month was 51, the same as for the preceding month. The per capita cost per patient was \$0.83.

Detailed statistics are shown in Table XV.

SANTO TOMAS HOSPITAL.

During the month a total of 1,381 patients was treated, 19 less than for the preceding month. The daily average of patients in hospital was 456, as compared with 462 for April, and the total number of hospital days was 14,147, as compared with 13,860 for the preceding month. Fifty-four deaths have occurred, with tuberculosis, organic disease of the heart, and pneumonia the chief causes in the order named.

Detailed statistics are shown in Table XVI.

DISTRICT DISPENSARIES.

The dispensary having the highest admission rate for malaria was Gatun, with an average weekly percentage of 0.16; that having the lowest was Culebra, with a percentage of 0.04.

Detailed statistics are shown in Table IX.

SANITATION—CANAL ZONE.

The employees' malaria rate in the zone was the lowest in the history of the canal, despite the establishment of the rainy season.

General sanitary conditions are good practically everywhere in the zone except in the negro localities about Paraiso, viz: Rio Grande, Hamilton Hill, Jamaica Town, and Spanish Town. These places are occupied mainly by negroes employed by the dredging division, and as the dredging is apt to continue for a long time, and as the town of La Boca has proved such a success, recommendation has been made that a similar "silver" town be built near Paraiso, and has been made that a similar "silver" town be built near Paraiso, and has been made that a similar "silver" town be built near Paraiso, and has been made that a similar "silver" town be built near Paraiso, and has been made that a similar "silver" town be built near Paraiso, and has been made that a similar "silver" town be built near Paraiso, and has been made that a similar "silver" town be built near Paraiso, and has been made that a similar "silver" town be built near Paraiso, and has been made that a similar "silver" town be built near Paraiso, and has been made that a similar "silver" town be built near Paraiso, and has been made that a similar "silver" town be built near Paraiso, and has been made that a similar "silver" town be built near Paraiso, and has been made that a similar "silver" town be built near Paraiso, and has been made that a similar "silver" town be built near Paraiso, and has been made that a similar "silver" town be built near Paraiso, and the silver "silver" town be built near Paraiso, and the silver "silver" town be built near Paraiso, and silver "silver" town be built near Paraiso, and the silver "silver" town be built near Paraiso, and the silver "silver" town be built near Paraiso, and silver "silver" town be built near Paraiso the silver "silver" town be built near Paraiso the silver "silver" town be built near Paraiso the silver "silver" town be silver "silver" town be built near Paraiso th

The following communicable diseases were reported during the month:

Measles.	13
Mumps	
Diphtheria	- 1
Malarial fever	7
Tuberculosis	1
Whoming cough	

Detailed statistics are shown in Table XVII.

SANITATION—PANAMA.

COMMUNICABLE DISEASES.

The prevalence of malaria in the city has reached a minimum. Among the 15,000 Panama Canal employees, living in Panama city, generally in unscreened houses, there occurred during the month ending the 29th, only 7 cases. Figures available from the city hospital, Santo Tomas, show a corresponding decline in the remaining 45,000 inhabitants. Other communicable diseases were reported, as follows:

 Measles.
Chickenpox
 Tuberculosis
 Whooping cough Leprosv

VACCINATIONS.

The work of vaccination was resumed, and 2,593 vaccinations were performed during the month, using the local product vaccine.

Detailed statistics are shown in Table XVII.

SANITATION-COLON.

Care of fire refugees.—Following the fire of April 30, in which 23 blocks of the business district were destroyed, there were about five thousand of the people of Colon without homes. Fortunately the city was not crowded and about two thousand were taken care of in existing buildings. That left something over three

thousand people to be taken care of by the city.

Shelter.—The Army furnished 350 tents, and the Panama Railroad Co. 50 box cars. There were also numerous families living in shacks and on balconies. The tents were set up by the Army on Broadway Park and side lots from the Beach to Ninth Street. The box cars were placed on side tracks in double line from opposite Thirteenth Street to the Consumer's Laundry on Broadway. The shacks were erected on side lots along Broadway and were later demolished, the occupants being sheltered in the tents.

Garbage disposal.—Garbage cans were distributed along Broadway in front of the tents and the box cars. These are emptied twice daily and the garbage incinerated at the public dump.

Washing.—The Panama Railroad washhouse on G Street was untilzed; it had long been in disuse, but the woodwork was

repaired, plumbing fixtures connected, and water connection made to a fire plug. There are 200 concrete washtubs in this building.

Cooking.—Each family has a small native charcoal stove to cook

the meals in front of the tent.

Bathing.—Bathhouses were erected, one to each block, each containing six shower sprays. The house was constructed of 2 by 4 inch lumber framework and zinc sheeting. Each house has a partition, with one side for the use of women and the other for the men, indicating each by the words "women" and "men." The floor consisted of the concrete sidewalk and the water drained to the street storm sewer, the water supply being obtained from the fire plugs.

Latrines.—The first three days pit closets were used. In the meantime flush tank closets were connected to fire plugs and the sewage flushed into the storm sewer, the house being built similar to the bathhouse. The storm sewer does not extend to the district where the box cars are located and pit closets are in use, these being surrounded by zinc houses, and covered by box seats.

Water supply.—The corner fire plugs were tapped and water

piped to the tents and box cars.

Policing of camp.—Dr. Baylis and nine hospital corps men from the Army have been in charge of policing the camp. Each man was given a section of the camp over which he had entire control, and authority to make arrests for sanitary nuisances. Special Foreman Braden and nine men have charge of the sanitation. The closets are oiled daily and all sanitary defects remedied.

Dispen ary.—A dispensary was opened the first day and is still in operation. Fortunately the camp has been singularly free from disease, no serious illness has occurred, and no illness what-

ever due to the condition of the camp itself.

Red Cross relief work.—Sixteen thousand rations were issued by the Red Cross during the month under the direction of Dr. Hearne. Employment, rooms, and help generally were obtained for many destitute families by the efforts of Mrs. Murphy, of Ancon. Besides issuing rations the Red Cross has furnished many destitute women with laundry outfits, first payments on sewing machines, etc.

Cleaning up Colon.—The Panama Railroad extended tracks over the burnt area and in three weeks had the débris hauled away and

the area cleaned.

Fly breeding.—There was considerable fly breeding over the burnt area and flies were greatly increased for a short period. However, since the area has been cleaned and sprayed with

larvacide the number of flies has greatly decreased.

Morquito breeding.—The number of adult anopheles mosquitoes caught and the number of breeding places found has increased over the number of last month. This is due to the change to the west teason. The hydraulic fill at Mount Hope caused the water to accumulate in the ditches above the fill and consequently more breeding places were found. Inspector Becker has taken on 10 extra men to keep the situation under control. The increase in malaria has been in proportion to the increased number of anopheles breeding places found.

Stables.—One stable was closed by order of this office for failing to comply with the sanitary regulations. The remaining stables that were required to institute certain improvements, such as concrete outside wall, new stalls, and new concrete flooring, are continuing the work.

The following communicable diseases were reported during the

month:

Diphtheria	. 5
Malaria.	. 24
Measles.	. 2
Mumps.	. 13
Trachoma	. 1
Tuberculosis	. 4
Typhoid fever. Whooping cough.	. 1
Whoming cough	1

There were 3,703 persons examined, of whom 1 received vaccination.

Detailed statistics are shown in Table XVII.

QUARANTINE SERVICE.

The plague situation on the South American coast shows little if any improvement. On the Atlantic coast we are conducting careful inspection of ships from New Orleans and Cuba, as well as such arriving from South American ports. The French and Italian lines having ships for Colon are bringing very few passengers from European ports, and very careful inspection of passengers and crew is made upon such ships.

Violations of quarantine during the month have been noted in special reports. The Panama Government immigration law No. 32, of 1914, was made effective May 5, and 37 steerage passengers arriving that day from Jamaica were sent back on account of having

insufficient funds.

As heretofore, masters of vessels, in transit through the canal particularly, wish to sign off undesirable members of the crew; this is permitted only after arrangements have been made for their deportation.

It is noted that on the Pacific side 83 vessels arrived during the month; the number of arrivals for the corresponding month last

year was 30.

Six supplementary inspections were made at Balboa quarantine on vessels from plague ports; refumigation was carried out on four vessels. Two shipments of hay were fumigated in lighters under the direction of the quarantine officer.

Much annoyance has been caused at Balboa Quarantine Reservation on account of entrance upon the grounds of unauthorized visitors. Arrangements are being made for the construction of a fence, and as soon as this is put up this annoyance will cease.

The temporary boat landing at Balboa quarantine was practically

destroyed on the 26th by stormy weather.

No disease of a quarantinable nature arrived at any of our ports during the month referred to.

Detailed statistics are shown in Table XVIII.

TABLE XVII.-SANITATION.

The following is a summary of sanitary work performed and material expended during the month of May, 1915, in the Canal Zone:

Work requests on supply department:	
Grass cutting	9
Screening	5
Miscellaneous	10
Work requests on engineering department	4
Work requests on other departments	2
Notices served to abate nuisances	81
Arrests	3
Convictions	3
Inspection, of closets	1.619
Inspections of stores.	43
Inspections of shops	102
Inspections of restaurants	2
Building permits approved.	1
Garbage cans emptied.	75.842
Closets disinfected	2,222
Rat traps used daily	2,590
	,

Adult Anopheles destroyed in houses	14,684
Adult Culices destroyed in houses	6,456
Larvacide used gallons Crude oil used do	427
Crude oil used	10,533
Kerosene useddo.	210
Date destrayed	414
Rats destroyed	
Containers with Stegomyla larvæ lound.	20
Houses disinfected.	1
• 0	
SUMMARY OF ROUTINE WORK DONE BY THE HEALTH OFFICE, PANA	MA.
Deliant of the control of the contro	
Mosquito, rat, and fly work:	
Lineal feet of ditches cleaned and maintained	00 100
Linear feet of discrete steamed and maintained	28, 103
Lineal feet of new ditches dug. Number of cubic yards earth used in filling.	2,937
Number of cubic yards earth used in filling	0
Gallons larvacide used	726
Gallons crude oil_used	2,290
Gallons crude oil used. Square yards pools oiled.	329,850
Water yards pools offed. Water containers treated. Mo quito breeding places found (33 Stegomyia). Fly breeding places found. Flies trapped (13,000 per quart). Number rats caught. Number room disinfections.	35,027
Mo quito breeding places found (33 Stegomyia)	239
Fly breeding places found	277
Flies trapped (13 000 per quart) quarts	25
Number rate equality	587
Number room disinfections	8
Number roting distinctions	•
Garbage confections.	
Number loads garbage removed to dump. Number cubic yards garbage removed to dump.	4,468
Number cubic yards garbage removed to dump. Total number of cans garbage emptied.	7,338
Total number of cans garbage emptied	108,008
Buildings:	
Number of buildings inspected.	5,507
Number of buildings inspected Number of plans for new buildings approved	11
Number of permits granted for repairs to old buildings	54
Total number of permits granted. Number of buildings condemned. Number of buildings demolished.	65
Number of building condemned	17
Number of buildings contemned	3
Number of billiangs demonsted.	3
Street cleaning:	
Average number of square yards cleaned daily Average number of square yards street sprinkled daily	600,000
Average number of square yards street sprinkled daily	90,000
Number private properties cleaned during month	5
Number of notices served and nuisances abated	330
Vaccinations:	
Number of vaccinations during month	2,593
Number of vaccinations during month. Total number of vaccinations since April 1, 1914.	19,086
Zotal number of vaccinations since right 1, 1011	10,000
Work Report for Colon, Cristobal, and Mount Hope.	
[Health office, Cristobal, May 31, 1915.]	
Sanitation, general, Colon:	
Square yards street cleaned	888,434
Cubic feet fumigated.	2,688
Square yards alleys maintained	678,700
Cubic feet fumigated Square yards alleys maintained. Number of private properties cleaned.	65
Number of rats killed	284
I and a word garban bandled	444
Loads yard garbage handled. Number of cans, garbage (2,268 cubic yards)	
Number of cans, garbage (2,268 cubic yards)	67,416
Colon dump maintained.	0.000
Linear yards ditches maintained	2,970
Parkway and E Street maintained.	
Square yards oiled	32,370
Square yards oiled	2,850
Number of receptacles treated Number mosquito-breeding places destroyed Number of fly-breeding places destroyed	23,700
Number mosquito-breeding places destroyed	66
Number of fly-breeding places destroyed	85
Number of nuisances abated.
